A Distributed Software Correlator

Ian Avruch, Sergei Pogrebenko JIVE

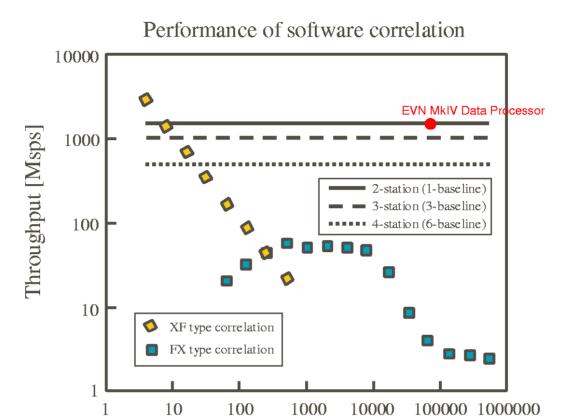

Figure 4. The XF and FX cross correlation performance evaluation using one PC. CPU cash memory size affect the performance loss at large lag.

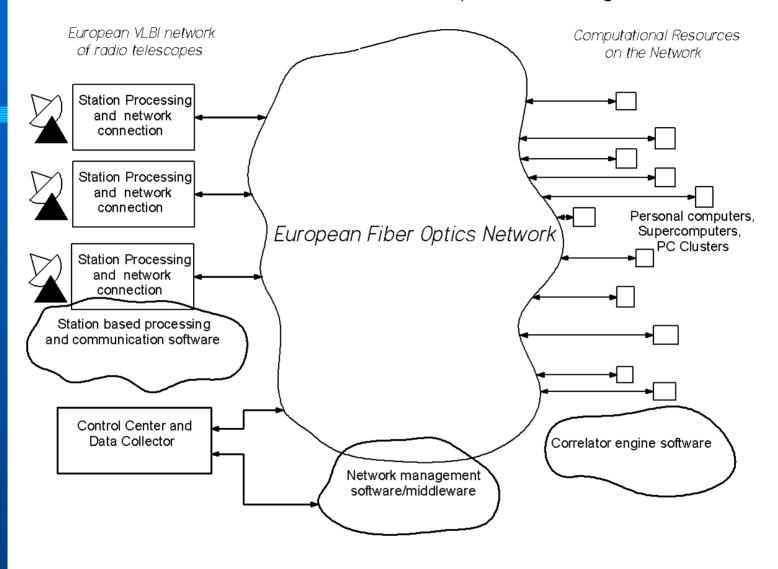

Lag Number

Kimura & Nakajima, IVS CRL-TOC News No. 21, 2002

- EVN-MkIV like: 16 stations @ 1Gbps~40 TFlops
- MCR Linux Cluster at LLNL ~11 TFlops
 1152 dual 2.4GHz Xeon
- SETI @Home last 24 hours ~54.7 TFlops
 1526 users mostly x86

Computational capacity exists, network on the way.
Upgrades for "free."

Software VLBI correlator conceptual block diagram

Challenges

- Efficient allocation of heterogeneous computation & network
- Dynamic configuration
- Average-real-time performance
