Footnotes to the Network Monitoring Report: C-band N10C3

General: Phase cal was off for this experiment.

- a) **Jb, Jodrell Bank:** Both Jb1 (Lovell) and Jb2 (Mark 2) were scheduled but could not observe because of technical difficulties.
- b) **On, Onsala:** Sampler statistics for BBC 6 LSB (Rcp of sb4) is about 15%, far from the optimal 36.4%.
- c) **Sv, Svetloe:** Swapped pols. BBC 11 USB (Lcp of sb1) is about 60%, far from the optimal 36.4%. Also due to the limitations of this station no fringes were detected above 5 GHz (BBCs 8 and 14).
- d) **Tr, Torun:** In sb7 Rcp (BBC 7 USB) sampler statistic is about 20%, while in Lcp (BBC 8 USB) it is about 50%, both far from the optimal 36.4%. Phase cal was on by accident.
- e) **Zc, Zelenchukskaya:** It was observing, but for logistical reasons the diskpack was later deliberately overwritten to record user experiment data. The evaluation in this report is done based on the ftp test.
