

# Network Monitoring Report: C N18C2

**Source:** J0530+1331, J0927+3902, J0555+3948

**Reference antenna:** Ef

**Experiment code:** N18C2

**Length:** 180 min.

**Date of observations:** 24/05/18

**Date of report:** 22/10/18

**Observing mode:** Mk V, mode 512-16-2, dual pol.

**Reference date:** 24/05/18; 144d 12h 00m

**by:** Ross Burns

⊗ According to expectation, no special remarks

■ Problem occurred - see enclosed footnote(s)

**Enclosure:** Footnotes C N18C2

# Footnotes to the Network Monitoring Report: C N18C2

---

## General:

- a) **Wb:** Crosshatch shapes in weight plots. Station was absent for much of the beginning of the experiment. Cross hands are high - this is hard to see due to normalisation, but is apparent in amphase-2 plot.
- b) **Nt:** Could only join later in the experiment, fringes seen but weak.
- c) **QUASARS:** Log files were late but still much appreciated.
- d) **Ib:** Power failure requiring restart during the NME. Insufficient time for the maser to stabilise was the reported reason for failure to get fringes after recovering from power failure. No fringes during the ftp test; cannot see fringes on disk data.
