

SCHED, 22-6-2017, 11.00

present eBob, Des, Mark, Arpad

eBob: debugging f2py. Common block support, did a pool request. This may of course take a year or so before it becomes part of the official release. Request was accepted though.

Some talk about migrating the SVN repository into github. Mark to send email to Craig, Amy, Brian about this, will be publicly available, including all history. Options to close: pay, or host it ourselves.

PGPLOT license, may ever become a problem, best ignore.

Next steps:

- insert PFB mode: rather ambitious at this stage
- VEX2 writer: maybe start with a VEX1 replication
- replace reader: key-in reader already exists

Third option seems a good start, eBob will look into it.

JJ deliverable end of July.

- eBob: f2py intro
- Arpad: general bla
- Mark: VEX2
- Des: key-in replacement

Finish draft half July, circulate among forum.

aob:

- Des mentions astropy. At some point would be worthwhile to make SCHED catalogs accessible to astropy.
- Des: should use Python3, working towards future after all. Agreed
