

JUC, 02-03-2018, 11.45

present: Harro, Des, Jonathan, Arpad

Des: has finished bringing the disk-based version to the latest e-version. Needs testing.

Harro: has upgraded eBobs fila10G simulator, backwards compatible. eBob also has script to set up test rig based on fake stations in db.

Jonathan: simulations with 1000B packets, even with zero spacing, do not fail. Will put in signal tap, try to break it with Harro's data simulator.

Harro: also modified cpp sender, can now specify rate. Also needs testing.

Next week!
