

JUC, 2-12-2016, 11.00, Arpad's room

present Jonathan, Harro, Benito, Arpad

Jonathan: testing return UDP packet. Chksum wrong, nearly done, has to chat with Harro and Des.

Benito: phase vs time, basically zero, but glitches. Bd and Sv no fringes with EVN, but with each other ok. Mapping problem? Des needed. Some issues with normalisation when RFI, different response of SFXC. High resolution recorrelation with SFXC. Also difference in noise SFXC JUC (more in JUC). LSB also seem noisier than USB in raw spectra. Need to check 16MHz, if new problem or already existed but not seen. Any NME at 16MHz should do, Benito will ask operators to do correlation, with both personalities.
