JUC, 10–03–2017, 13.30

present Harro, Des, Jonathan, Arpad

– Jon: good FW on both UBs now. Handed over for testing

– Des: Aard wanted to test, found recent NME, found it was 32MHz instead of regular 8, want to test 16 MHz personality first. Need other NME. Aard will do new clock search on scan itself first.
Some issues with runjob, related to way data are referred to in db. Will check today

– Harro: Gino provided fix which kind of works, needs to fix fix though, half packets in second thread zero values. If good, JUC good to go, although need to check that JUC can skip sequence number.

Once comparison SFXC – JUC more detailed, involve dr. Bob. Next week hopefully.

– Des: things are much better now that mk5read is integrated in jive5ab.
