

JUC meeting, 12/3/2015, Arpad's room

present: Harro, Jonathan, Arpad

Jonathan: updating 32MHz version, bug fixes, increased resolution of delay model

Harro: VDIF translation fixed. Made plots of differential phase rate, according to Des it seems to be a station based effect.

Jonathan asked Des to turn off quadratic term, at which point Des found out the quadratic term was turned off. After turning it on, it became a lot less noisy (phase vs time)

Harro and Jon will now test 2 runs of the same scan with UB, see if there is no difference (sanity check!)
