JUC, 13-04-2018, 11.00

present: Des, Harro, Jonathan, Benito, Arpad

Des: found out why CASA would not accept MS, issues with two tables. Harro fixed j2ms2, now works! Now need a way to import Tsys to MS and we could get rid of IDI fits. Discussion for later. Will now fix API, which is broken. Will also make sure the new IP addresses are in the right place(s). The generation of zillions of plots has to be discussed with Harro. Also, Harro's packet spacing fix works.

Harro: weights of 47.5% are a worry. Very stable. Nothing obviously wrong in j2ms2. Looked at raw dump weights, counters wrong. Over to Jonathan

Jon: need to look at 32MHz data, 16 had good weights. Need fix to api from Des first. Also, has put in control function for turning on UDP reply, Des to use this in control code. After all these fixes, Benito will attack a real project.
