JUC meeting, 18-09-2014, Arpad's room

present: Harro, Des, Jonathan, Arpad

Des: staircase is gone. Good!

Jon: programmed UB1 with new cable, worked. Sjouke then switched DDRs. Then could not program it anymore with new cable, but it worked with old cable. Good grief. As all works now, leave as is until it breaks again.

Redid scan 3 with dogy Tr frame, now does not get stuck. But did not try with many stations, try next, all data on aribox

Harro will do sanity check, VDIF vs Mark5B frames on SFXC

Jonathan is working on test design UB^2, moving along, all has to be technology independent.
