JUC, 19-10-2018, 11.00

present Harro, Des, Jonathan, Benito, Arpad

Jon: 28 bits counter meets timing, weights look good, should be enough for wider bands, problem seems solved. Also took out an unused signal tap. Will fix 16 and 32 MHz personalities, only install 32 on both boards. Looking at how to program from eprom, currently very old image. Looking at UB2 paper of Gijs.

Benito: will longest integration stay 1 sec? Answer yes. Will correlate with new versions

Des: did 2 attempts at testing during regular e, in both cases got kicked off after one hour, too short. Will now try to use 3 or 4 telescopes outside of session. After Harro gets back from IVTW. Benito will make schedule

Harro: sent out emails about opening firewalls for new JUC IP addresses. Need to check again before next test.

Jonathan will now work full-time on Aarts. Talk again in January
