

JUC meeting, 20-11-2014, Arpad's room

present Harro, Des, Jonathan, Arpad

Jonathan: much work on UB<sup>2</sup>, before Groningen meeting. Made firmware without timing errors, handed it over to Des who could not break it.

Des: system now works properly iwth flexbuff

Harro: we now have an experiment for tests, 11 hours, of which he took 4 periods of 1 hour. EL48A, phase ref expt, cal-cal-source. Cal scans were extracted. It is now possible to extract all available scans in one go, via eBobs tool.

Des: next week we should have correlated results of whole set. Should ask Aard to do SFXC correlation of same set, same params.

Then, show results to Sergei. Dependencies of strangenesses on allocation of stations to nodes should be investigated.
