

JUC meeting, 25-09-2014, 14.00, Arpad's room

present: Harro, Des, Jonathan, Arpad

Des: can now read from flexbuff

Output with wider coefficients: pretty much identical. Staircase is gone. Striped files, need new scripts. Need meeting about flexbuff sanity (eBob, Mark)

Problem with slopy phases: 6 are always good, 3 terrible, 2 dodgy. Talk to dr. Bob?

Jonathan: jump at beginning of scans not at all explained. Looked at stalling of node with dodgy frames, more signal taps!

Des mentions Compaan, firm that does good (?) things like accelerating applications on all kind of platforms. Arpad should talk to Andre.
