

JUC, 27-7-2018, 11.00

present Des, Jonathan, Benito, Arpad

Des: eBob broke runjob, in future should talk to Benito and/or Des when committing new versions, not easy for eBob to test. Fixed now. Des broke several things while fixing Jons script, now fixed again. Had no fringes in 16 MHz version, reboot needed. Should make sure every run starts with reboot, completely unclear why UB unhappy.

Jon: both personalities now seem to be working fine, no problem with weights?? Only during e? When happens again, should warn Jon immediately, can test with script.

Benito: run an expt this afternoon, Des still here to fix stuff at last momen (vacation next week)
