

JUC, 5/11/2015, 11.00, Arpad's room

present Jonathan, Des, Harro, Arpad

Jonathan: has been working on UB2 this week, I2C interfaces, HMC schematic, needs to talk to Gijs (should be back next week)

Des: 1st attempt at 32MHz test, not very successful because of uninteresting stuff. Will wait for change-over to new unictl. If that all works, what will we do with old unictl? Mirror? Need to decide at some point, no hurry.

Des: has made list of things that need to be done to make JUC operationable. Will send email.

Harro: made debian package for cpp sender. Will hand it over to Paul/Wybren, not much need for Harro to dive into Ansible. Will take that off his todo list, now that there are two system persons around.
