

JUC, 6-10-2017, 11.00

present: Harro, Des, Jonathan, Arpad

Jonathan: fixed the register, Des should check and use it. Des did check whether his fix worked, and data did indeed travel through the correlator (lots of packet loss)

Harro: should record some 1000B data for checking. Made VDIF frames, cornerturned. Should check of weights are ok now. Jonathan will do this (again).

We'll try to get some test time to get recorded cornerturned small size VDIF frames, next Tuesday. Harro and Arpad in Bologna though, so eBob would have to do it. First find out if Pablo needs the network, if not whether some telescopes are available, then explain eBob what is needed. Telescopes with normal and small frames, make sure things work on the fila10g. Then start fixing the control code.
