

JUC meeting, May 7 2015, 13.00, Arpad's room

present: Jonathan, Des, Arpad

Des: spectral averaging support built in

Jonathan: sure it will work, but weights vary across sub-bands, which is not possible. Old problem which went away by using other seed. Now need to get to bottom. Definitely BN FW is to blame, put in signal taps before and after validity accumulator, now working backwards. Probably to do with dual clocks (DDR), master and secondary.

Des: will start on 32MHz support in control code
