

JUC, 17-03-2017, 11.00

present Harro, Des, Jonathan, Benito, Arpad

- Des: merged several e-VLBI and other fixes in main control code. Work on new e-version ongoing, basically now hardware-driven, rather than station-driven. About another week? Jonathan: do changes affect scripts? Yes indeed, will need to fix.

- Jonathan: 64 MHz test: ran into troubles with script....

- Benito: no progress, spent time on getting AIPS working on his machine.

- Harro: Aard selected one scan, did the clock searching on that scan, made sure integration time on SFXC agreed exactly with JUC. New results: std dev of phase vs time now identical. Good!

next step: make images of those two data sets, compare. Then, pic of the day!
