

JUC, 19-05-2017, 11.30

present Harro, Benito, Des, Jonathan, Arpad

Benito: part of data deleted, probably by dr. Bob. Some data left, enough to check problem with weights. Not for extended sources though. The Gui should be more instructive and prevent stupid things. Des to speak to eBob, list of demands/wishes.

Des: need work from Harro to be able to do formatter test.

Harro: needs to know what exactly is failing, plus mods to cpp sender (keep-alive packets)

Arpad: try to do formatter test, be ready for real test during e on 22 June

Jonathan: working on 64MHz, fringes but noisy, spectruc is chopped up. Probably combination of parallel ffts goes wrong
