present Des, Harro, Benito, Jonathan

Des and Harro: nothing

Benito: correlated his experiment some 2 weeks ago. Trying to do the data reduction in CASA, ran into problems, now trying to fix it. ANTAB files need fixing, CASA actually is more strict than AIPS.

Jonathan: weights are wrong at 32MHz and 1 sec integration. Ok at shorter, or 16MHz. Maybe problem with validation. Signal tap has been switched, but needs to be extended somewhat. Still unclear whether the problem is in FN or counter in BN. Wrong calculation of weights or actual missing data. Working on it.

e-test: if possible next e-session, however there are lots of other tests coming up.
