

WURM 23-03-2026 Strategy WURM (Marjolein's office)

AardK announcement: KVN in evn-monitor!

#1080 new normalization scheme

AardK: move option unto sfxc main branch

#1081 alt weighting in Fringefit

DesS: status of ticket set to feedback (no interest @NRAO)

#1102 centralized id/auth mgmt

BobE: group mgmt in POLARIS uses Keycloak directly. Before putting into production: question to answer is 1 realm or > 1 realms? [After discussing pros/cons: decide on 1 realm]. This requires proper role definitions; enable Mattermost via proxy, proxy test if user has "Mattermost" role. (Mattermost thinks anyone authenticated against an external IdP is a valid user. That is not how we assign access.)

#1118 archive-script incl. DOI rollout

BobE: DOI generation fixed done, forgot to close.

#1213 Enterferometry demo

closed due to lack of resources.

#1236 batch proc. car jobs

WybrenB: SLURM on prod cluster, partitions made.

SLURM on test cluster in use.

BobE:/MarkK: SLURM queue submission, generation of machine files.

#1327 next-gen GPU corr

PaulB: installed, purchased

#1330 JIVE vs geodesy

-

#1333 j2ms2 MSs in CASA

DesS: CASA still not happy after FLAG_CATEGORY shape fix by @MarjoV, suggest reversing P, CH axes.

#1364 EVN storage pool refresh

BobE: flexbuff balancing tool created not tested. other tool id.

PaulB: storage pool plan in progress

#1369 POLARIS

ongoing/active development

#1402 Jupyter Hub securitization

enable jupyter hub admin auth for new users (closed)

Need extra observers on "access request" mailbox, need to develop criteria (policy) such that a coherent access policy is employed → Action MT re. policy requirements + who implements it.

AOB: sfxc-014 was still reserved as BinderHub - fixed.
