

WURM, 6-3-2017, 14.30

present: Ilse, Aard, Mark, eBob, Des, Paul, Wybren, Arpad

- Ilse: Michael Janssen visited. Looking at weights definitions in casa and aips, not much documentation. No feedback yet on msplot weirdness. Testing simulations again.

- Aard: coherent de-dispersion was merged, but still some problems. Started benchmarking of SFXC with eBob, nobody actually knows how many 2Gbps stations can be correlated at same time. Maybe also try 1Gbps. Need many senders, Mark5s?

- Mark: was in Den Haag. Visit of Michael. Re-starting cleopatra work

- eBob: Wb flexbuff software done, needs testing. Automated fringe testing was used again, bug found. Testing 2G. Looking at possibility of subnetting in log2vex, radioastron sometimes, soon geo?

- Des: C++ FF is ok, talk to George to see how to check it in. Done some fixes to python prototype. Now working on e-JUC control

- Paul: Trantor gone again, clearly local network problem. May have to go in person. Working on design of network, talked to Mark. Will use climate chamber th-fr, wo in Utrecht, today and tomorrow SKA telco

- Wybren: switch module really broken, order new. Go through list of RnDm actions. NSF is slow, but seems to be inevitable, ie not broken.
