WURM, 6-5-2019, 14.00

present Paul, Mark, eBob, Des, Aard, Ilse, Arpad

Paul: did VLBI with Wb, MFFE broken. Will now start rebuilding FB12 and 13 for production use. Need to tidy up jop83. Backup server needs downtime, to increase space. Working on deliverable and PoD

Mark: writing deliverable. Took a look at a paper of Michael. With Aard, fixed SFXC to Mark4, everything seems fine now. Should start correlating the real project. Suggested a visit by Maria (is that her name?) from Bordeaux in June, but dr Bob does not take responsibility, Patrick does not answer emails. Bit vague. Will go on vacation for 2 weeks now. Aard should send some emails to dr Bob about having the correlation done before her visit.

eBob: vex writer in pySCHED now writes files that are functionally identical, now look at warning messages. And then work on noise cal.

Des: managed to fringe fit with a model, found that he is the only one who does it correctly, only using clean components, not convolved with beam. Needs to do some stuff for Michael.

Aard: the geo stuff Mark mentioned, plus primary beam correction. Normalisation of amplitude on central source at intervals in time. Alexander is also in the house, will work on a paper on polarisation (circular?) in repeating FRB

Ilse: started invertory of requirements for CASA pipeline. ERIS in Goteborg in October, need to find lecturers, maybe Michael, Cristiana?
