WURM, 11/06/2019, 15.00

present: Mark, Paul, eBob, Des, Aard, Harro, Arpad

Mark: finish deliverable

Paul: finish deliverable. Debugging m-crate. QSFP broken, but there is still a problem. New disk for Trantor, no time to go so asked Wb operators to replace it. FB 13 is in use, FB 12 maybe before vacation.

eBob: pySCHED, now less overhead when checking out catalogs. Uploaded all to PIP. Looked at conda package, however all dependencies also have to be conda, too much work. Making a YAMR environment file. Will write email to sched forum this week. Working on TOG presentation.

Des: put in pull request (# iterations, parameters). Asked Jay to do validation. Looking for data with phase cal tones, not found any yet. Maybe Mark has some. Ask Jay! Comparing FF results AIPS and Casa, also looking at model data of Inyan.

Aard: done replacing ftp fringe plot. Matplotlib is way too slow for plotting. Try chacho, which is drop-in replacement. However, completely broken. Looking at some suggestion of Jun for plots. Received email of Jupyter/Casa user, problems on mac. Working on paper of the Asterics conference.

Harro: Ar stuff. Can now produce procedure files from vex file. Generate snap files. Still lots more work to do. Leaving for Puerto Rico on Saturday.
