

WURM, 28-05-2018, 14.00

present Ilse, Mark, Paul, Des, Wybren, Aard, eBob, Arpad

Ilse: working on report for JJ, advocacy. Working on simulations with Inyan, compare Aips Casa

Mark: gave input to Paco for talk about geo capabilities of SFXC. Made fourfit plot that looks quite like what difx produces. Working on re-referencing

Paul: tomorrow to Wb, move WR switch to rack beside it. Surfnet has to have access to it as well. Wednesday to Surfnet at Science Park. Looking into getting a fiber from building to DT. Working on SaDT actions.

Des: fixing JUC script of Jonathan. Has worked on geo vex stuff, now passes the parser but insertion in database is tricky. Has read the stuff of Ivan, works with simulated data, will try with real data as well. Ivan says it is expensive, so it probably is.

Wybren: replaced disk in jop83, took all disks out and logged the serial numbers. Testing weight dips. Removed bonding between Mellanox and SM switches, dips disappeared

Aard: m4 amplitude normalisation now ok. Cross correlations are normalised with autocorrelation, van Vleck correlation, and multiplied by factor of 10000 (???). Will test network with Wybren

eBob: Sched work ongoing, should talk this week
