

WURM, 29-7-2019, 14.30

present Mark, Paul, Harro, eBob, Arpad

Mark: Maria came to visit from Bordeaux, finished deliverable, somewhat useful. Compared the results of Bonn correlation, there are differences, which is expected, but not significant. Reducing expt to measure positions in K band.

Summer student of Huib is finding bugs in CASA. EOPs: need AIPS-like software in CASA.

Operators were complaining that when running two experiments all display windows end up on top of each other, fixed. More than 2 expts will be problematic.

EHT telecon on report about pol work this afternoon. Finally, George will attend ADASS, probably visit here as well.

Paul: changed to Surfnet8 on Friday, test today, 8Gbps 0% packet loss, did 12 Gbps accidentally. Ordering 100G equipment.

M-crate is still a problem. MLAG?

Calculating proper motions. Another disk died. Need to talk about proposal tool, unclear if Astron guy is in at all. Backup problem with ZFS, started with Ubuntu18. Wait for next Ubuntu?

Harro: finished etransfer implementation in jive5ab and m5copy, tested with Bonn and Wz, On. Spent quite some time on ADASS. Ar: some problems with compiling m5spec and vdifspec.

eBob: 3-day expt that was reported about earlier had some problems, scan names are not right anymore. Fixed. Showed pySCHED to support scientists. Needed to update catalogs. Working on code for e-VLBI, need to re-write quite a bit of Fortran, more work than hoped.

Paul: jop83: root disk full, caused by logfile of 5.5GB. Need to zip it. Also AIPS installation does not work. Want to shut down ccsbeta and eee. Fine.
