

1st WURM, 13/10/2016, 13.30, Arpad's room

present Ilse, Harro, Des, Paul, Wybren, Jonathan, eBob

Ilse: exercising fringe fitter

Paul: upgrading VMcluster to latest OS release, some machines may go down for a bit (like ccsbeta), some downtime will be noticeable, some not. New JIVE key will be made this week (expires January next year).

Des: working on fringe fitter, figure of merit, investigating some failures

Jonathan: working on 64MHz personality, debugging. Same data into two personalities now gives same results, can be used to compare 64MHz as well. Joining ARTS meeting tomorrow

Harro: debugging Jb signal chain. Quick found a segfault caused by jive5ab, uses newer kernel? Investigating (and since then, has solved issue, closing an unopened mutex). Cleopatra e-transfer program work, python to C++. Benito is now working on comparison JUC and SFXC

eBob: fixed automated fringe tests which had been broken, will give demo to supp sc. Expanding to fringe tests for flexbuff as well.

Wybren: working on synch of backup with Trantor. FlexBuf 4 nearly done
