

WURM, 6-8-2018, 14.00

present eBob, Paul, Mark, Harro, Arpad

eBob: working on translating log2vex to Python. Bert complained about speed of showlog, seems to be mainly caused by lpstat, only on ccsbeta, not on ccs. ccs only needs one e-test to become the standard.

Paul: looked with Mark at autocorrelations from his simulated backend, valid VDIF now. Fiber planning has been done, but Alex gone on vacation. Reminded his co-workers about deadline for del D5.6 (end of September). Martin now has an account on redmine, and root on flexbuff. Still need to renumber unictl, wonders if it talks to outside world. Harro: yes indeed, but unclear if other changes are needed, not according to Paul. Will change outside ip address, need to warn stations in case of firewall issues.

Mark: some ff related discussions, but everybody is away on vacation it seems. Ticket for importfitsIDI. Working on multistream SFXC, needed for eMerlin.

Harro: fixed j2ms2 after complaint of Benito. Now has a tool to place single dish Meerkat data into numpy array, previously would stop as soon as 1 packet was missing. Adapt VDIF streamer to handle these data as well. As few jplotter fixes are needed
