

WURM, 10-4-2017, 14.00

present Ilse, Paul, eBob, Mark, Des, Wybren, Harro, Aard, Arpad

Ilse: worked on press release for 50yr VLBI. Worked on Lofar data, found that flagged data was still in solutions. Fixed. Looking at corrected phases. No comparison though. Also did some stuff for the kwartetspel of Astron. RINGS telecon this week. Wants CASA on laptop

Paul: took folks from Delft on tour last week. Needs to test connection to China. During ToO again 20% packet loss. WR in climate chamber, here to Wb and back, now heat up WR and see how it responds.

eBob: continued work on subnetting, changed interface and also made place in database

Mark: checked subnetting in SFXC, removed some time dependencies which were not needed. Working on deliverable document for Cleopatra. Took a look with Ross at polconvert, one continuum and a line observation. Seems to work, which is real progress. Ivan will be here in May, will need to talk.

Des: Benito is trying to make image with structure, lots of problems because Aribox had not been restored to its original state. All fixed. Still working on preparation of e-test on Wednesday. eBob will need to make a parallel runjob version for this.

Wybre: working on ZFS send. Maybe make pool of files to use, Paul against it. Otherwise could put some extra disks into Trantor? Re-started Zabbix server. Without all the code by whatshisname it should not crash the data base. Start working on console server.

Harro: work on TOW presentations

Aard: e last night, Martin called several people, Aard did not hear this. Every so much time weights go to zero. As if input part of correlator cannot keep up. Aard has built in some diagnostics, we'll see. Annoying that Wb still loses 0.3% packets. Paul suspects SFPs. Harro: ccdisp: fringe plot does not refresh in Firefox. Mark wrote original script, will take a look.
