

Network Monitoring Report: K-band N18K2

Source: J0927+3902 and OJ287 **Length:** 180 min. **Observing mode:** Mk V, mode 512-18-2, dual pol.
Reference antenna: Effelsberg **Date of observations:** 07/06/18 **Reference date:** 07/06/18; 158d 12h 00m
Experiment code: N18K2 **Date of report:** 27/09/18 **by:** Benito Marcote

- ⊗ According to expectation, no special remarks
- Problem occurred - see enclosed footnote(s)
- ⊘ Station did not observe (not scheduled)
- Entry not applicable/investigated

Footnotes to the Network Monitoring Report: K-band N18K2

General:

The sampler statistics are sub-optimal for all stations (they are around 20-29-29-20% for -, +, +, +, +, +, respectively). Only the KVAZAR stations exhibit optimal values of approximately 16-34-34-16%.

- a) **Nt, Noto:** Weak fringes at the beginning of the observation, probably due to problems with the pointing. Investigating during and after the NME.
- b) **Ys, Yebes:** no fringes found until the last scan (from disk) for unclear reasons. A lightning struck the station the week before, some equipment could have been damaged at the time.
- c) **Zc, Zelenchukskaya:** the autocorrelations show several spikes (likely from an internal origin).
- d) **KVN (Kt, Ky, Ku):** Did not send data during the NME. Diskpacks have still not arrived at the time of this report.
- e) **Cm,Kn, Cambridge and Knockin:** A phase trend is observed during the NME, potentially originated by a wrong pointing.
- f) **Kn,Ta, Knockin and Pickmere:** Cross pols. Fixed during the post-processing.
