Enclosure: Footnotes SX-band N20SX1

Footnotes to the Network Monitoring Report: **SX-band** N20SX1

General:

Two modes observed: S/X and X-only mode. Note that the gain calibrations from the EVN Pipeline in the S/X mode show large offsets due to combination of both frequencies within the same dataset. They are not representative of intrinsic gain calibration offsets.

) **Wb, Westerbork:** Fringes found on the X-only mode. However, no fringes found at S band (SX-mode; Wb only recorded the S-band part).

) **Ef, Effelsberg:** (*Same issue as previous session*) system did not change modes automatically. Required a manual intervention.

) **Ur, Urumqi:** Could not participate due to COVID-19 restrictions.

) **Ys, Yebes:** Joined for scan 10 due to recording issues at the beginning of the NME.

) **Hh, Hartebeesthoek:** Low signal-to-noise at S-band due to the dichroic reflector system.

) **Ir, Irbene:** Signal only in IFs 7 to 11.
